

RENAULT TRUCK COMMERCIALS

Are your trucks DVS ready?

PSS KITS INSTALLED FROM JUST £1,350 + VAT

Big changes are coming to London's Direct Vision Standards in 2024.

If you operate in or around London, you need to be ready for Transport for London (TfL)'s major update to Direct Vision Standards (DVS) in October 2024 that will impact all vehicles over 12 tonnes GVW.

Starting from 28 October 2024, all vehicles over 12 tonnes will need a minimum 3-star rating, or risk penalty charges.

Make sure your fleet is ready for the change with a Progressive Safe System from Renault Truck Commercials.

**RENAULT
TRUCKS**

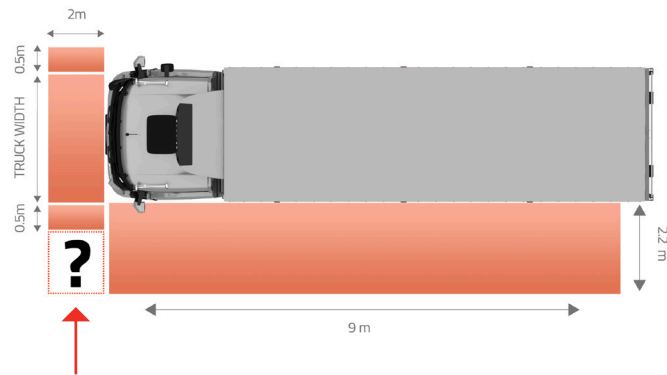

WHAT IT MEANS FOR YOU

If your vehicle's rating is zero, one, or two stars, you'll need to add a 'Progressive Safe System' (PSS) for operating in London, or face a fine. PSS includes assistive technologies that improve road safety, and it's down to the operator to ensure that their equipment for indirect vision, including blind spot and moving off information systems, is fully operational.

MAKING IT EASY

At Renault Truck Commercials, we've made it simple for you to get DVS ready. TFL expects DVS safety to be highly accurate, which is why we use AI camera technology to ensure the highest standards of quality and performance.

TFL PSS REQUIREMENTS

But what happens here?

OUR DVS BSIS SYSTEM

HOW IT WORKS

Smart enough to 'ignore' street furniture and stationary vehicles, our AI cameras focus on real, imminent danger so your drivers are not distracted by false alarms when they're trying to concentrate on the road in busy urban areas. AI camera technology also helps reduce accidents by 85%, which may also benefit your insurance premiums. Above all, it's about potentially saving the life of a cyclist or pedestrian who is in a driver's blind spot.

Our proven PSS by Exeros are OEM specified and hold TUV approvals for R151 and R159, surpassing industry standards. And with over 2,000 hours of rigorous testing, including live road tests and various scenarios, you can rest assured that your fleet is equipped with the most reliable and effective safety solutions on the market to ensure the safety of your drivers, pedestrians, and cyclists alike.

1. MOVING OFF INFORMATION SYSTEM (MOIS):

A front AI sensor that detects people in front of the vehicle and alerts the driver as the vehicle starts to move forward.

2. BLIND SPOT INFORMATION SYSTEM (BSIS):

An AI sensor that detects people along the nearside of the vehicle and alerts the driver without false alerts.

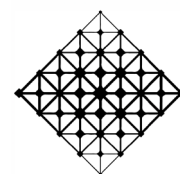

3. LEFT-TURN AUDIBLE ALERT:

An intelligent speaker warning people when they're in danger and too close to the vehicle.

4. IN-CAB AUDIBLE & VISUAL DISPLAY

5. VEHICLE SCREEN

Camera views that you and your driver can see in real time.

We go a step beyond DVS with Safety Mesh.

A high risk area where our two sensors merge together creating full coverage of the nearside/ front blind spot.

HIGHLY ACCURATE, DURABLE, OEM SPEC

Accurate distinction between VRUs & street furniture

Achieves no false alarms

Works in all light or weather conditions

Links to our recording system for easy live & remote playback

Suitable for all heavy vehicle fleets

THE RIGHT PSS SYSTEM FOR YOUR BUSINESS

When it comes to safety, there's no room for compromise.
